PROFILE

Final-year MSc Data Science student at the University of Messina (weighted average 28.89/30), currently a research fellow in the NISC Lab and an intern at FCRLAB. I build real-time AI and big-data systems — from a streaming hate-speech detection pipeline to a modular, biosignal-driven biofeedback platform for VR exposure therapy. My background runs from art and design through UI/UX and React development into data science, which lets me connect rigorous engineering with clear, human-centred design.

RESEARCH & PROFESSIONAL EXPERIENCE

Research Fellow — SMASH Project, NISC Lab

2025 – Present

University of Messina · Supervisor: Prof. Giorgio Mario Grasso

- Selected through a competitive “bando” research scholarship to join the lab’s SMASH project.
- Designed a modular, configurable biofeedback platform for VR exposure therapy (spider phobia and public-speaking anxiety), extending the lab’s real-time physiological-signal pipeline.
- Completed in about three weeks a configuration that had been stalled for months; the modular architecture allowed three parallel projects to be finished together.

Research Intern — FCRLAB

2025 (75 hours)

University of Messina · Supervisor: Prof. Francesco La Rosa

- Worked on medical image segmentation and an LLM-based recommendation system, running in parallel with my Master’s thesis.
- Applied the same big-data and deep-learning stack as the thesis, with early arrivals, frequent reports and a fast, well-documented workflow.

Founder & Content Creator — BetterWix

2024 – Present

YouTube & Social Media

- Self-improvement channel built around text-to-speech audiobooks and personal essays on mental health and growth.
- Grew the channel to ~3,900 subscribers, ~281,000 views and 67 hours of watch time; wrote, recorded and edited every video and used audience analytics to guide strategy.

UX Researcher & UI Designer — Taraz

2021 – 2022

Mobin Etesal Aseman · Iran

- Started as a two-month university internship and stayed on to rebrand the company’s flagship app into Taraz.
- Led UX research, UI design, content management and product maintenance, improving customer satisfaction by roughly 24%.

React Native Developer & UI/UX — Eplran (Startup)

2020 – 2023

Iran

- Core team member developing the Smart Door Access System (my bachelor’s thesis, graded 19.25/20): facial-recognition access control resilient to masks and facial injuries, on low-cost hardware (Raspberry Pi).
- Led application development, UI/UX and advertising design, and took the project through to a patent application in Iran.

EDUCATION

MSc in Data Science — University of Messina, Italy

2023 – 2026 (expected)

Weighted average: 28.89 / 30 · one exam and the thesis remaining

- Thesis: Scalable Real-Time Hate-Speech Detection — a big-data architecture (Kafka, Spark, Kibana) combining BERT deep-learning models with automated AI agents, classifying live data from YouTube/X at ~80% accuracy.
- Coursework: machine learning, statistics, predictive modelling, data security, blockchain and privacy, digital management.

SELECTED PROJECTS

- VR Acrophobia Exposure Therapy (VRET Biofeedback), NISC Lab — a real-time system where three physiological signals (heart rate, HRV/RMSSD, electrodermal activity) from a PLUX biosignalsplux device drive a Unity exposure scene (balloon altitude) over UDP: the participant's physiology, not their input, controls the experience. Python, signal processing, LSL, Unity. github.com/parsak4936/Biofeedback
- Real-Time Hate-Speech Detection — Kafka/Spark streaming + BERT + agentic AI, with Elasticsearch/Kibana. github.com/parsak4936/Real-Time-Hate-Speech-Detection
- SIMA Data Extraction — mined and structured research metadata from multiple APIs into taxonomies (with the UniMe Economics department). github.com/parsak4936/SIMA-Data-Extraction-Project
- Bat-Algorithm Optimization — metaheuristic optimisation (Bat / Memetic Bat vs Genetic Algorithm) on N-Queens, Knapsack and TSP. github.com/parsak4936/-Bat-algorithm-Optimization

TECHNICAL SKILLS

Data Science & ML: Python, Pandas, NumPy, Scikit-learn, Machine Learning, Deep Learning, NLP, LLMs & AI Agents, Statistics

Big Data & Infrastructure: Apache Kafka, Apache Spark, Elasticsearch, Kibana, Docker, SQL

Software & Web: React JS / Native, REST APIs, Firebase, Git / GitHub

Signals & Systems: Biosignal processing, real-time systems, embedded hardware (Raspberry Pi)

Design & Content: Figma, Adobe Photoshop / Illustrator / Premiere Pro, UI/UX, Power BI

CERTIFICATIONS

- Junior UX Designer — Rahnema College (2021)
- Advanced Python Programming — Maktabkhooneh (2021) · Commercial Networking (2021) · Mindfulness Skills (2021)

LANGUAGES & INTERESTS

Languages: Persian (native) · English (C1, TOEFL 95/120) · Italian (beginner)

Interests: Affective computing & biosignals, ethical and agentic AI, real-time / big-data systems, storytelling and content creation, creative writing, travel
